

Name:

Science 8 – Water Systems Presentations

The purpose of this assignment is for each group to be the “teacher” of a section of the Science Probe 8 textbook. You will each be in a group of 4 and will have a role to play in teaching the class. Your group will also pick a Captain...a person who will report to me with the progress of the group and who will be responsible for making sure that everyone is doing their job. These are the jobs that you will choose among the group:

1. Presenter
2. Presenter
3. Activity Maker
4. Quiz Maker

Once this is decided, record the information below:

Presenter #1	Presenter #2
Activity Maker	Quiz Maker

CAPTAIN: _____

Record the section(s) that you are responsible for: _____

Each person is to take Cornell Notes for this section(s). They are due next class.

Teaching the Class

On the date of your presentation the two presenters will teach the section to the class through either a PowerPoint Presentation, a Prezi or another method using technology. A Prezi is a new type of PowerPoint presentation that interconnects ideas in really cool ways. Got to prezi.com to explore this tool before next class. The presenters should pick out the important information (the big ideas) and present it to the class so that everyone starts to understand what the section is about.

The activity maker(s) will create an activity...worksheet, lab, game, etc. The point of it is to LEARN the material in the section. This activity should not just be fun, but should help each student to understand the material better. You need to get approval from Ms.B before you make the activity.

The quiz maker will be making the quiz! This will be given to the entire class at the start of the next block to make sure that they understand the material. It can be whatever kind of quiz you want but it shouldn't be longer than 15 minutes and Ms.B needs to see it AND the answer key beforehand.

YOU are responsible for the class learning and understanding your section so take this seriously and do your job! If all of the groups do a good job, there will be no need for a unit test!
